

TRINH VAN DUC

SUMMARY

A results-driven Technical Professional with extensive experience in architectural drafting and product management. Proficient in Revit BIM, AutoCAD, and various graphic tools. Proven track record in project coordination, Quality Control (QC), and leading teams to deliver complex projects on schedule. Strong technical mindset characterized by meticulous attention to detail and rapid adaptability to new technologies

EDUCATION & CERTIFICATIONS

- Cao Thang Technical College
- English Proficiency: Level B Certificate
- IT Certificate
- AutoCAD Certificate
- Continuous Learning: Currently pursuing C++, Python for AI applications, and Dynamo.

SKILLS

- Software: Revit BIM (Fluent), AutoCAD (Fluent), Photoshop, Microsoft Office (Advanced Excel).
- Technical: Technical drawing interpretation, Construction codes/standards, Bosch equipment fault diagnosis.
- Soft Skills: Specialized English communication, Problem-solving, Teamwork, Time management.

TECHNICAL SPECIALIST

WORK EXPERIENCE

EnTech Co. | Environmental Company | 2024 – 2025

- Equipment Management: Managed and supplied industrial kitchen equipment (Chiller/Freezer units) and Kitchen Ventilation Systems for 5-star hotels and restaurants, including New World, JW Marriott Hotel & Suites Saigon, and Pizza Hut.
- Site Operations: Directly participated in on-site projects and specific categories for luxury Hotels, Resorts, and Spas.
- System Design & MEP: Contributed to the development of Chiller/Freezer systems, Kitchen Ventilation, and MEP equipment layouts; optimized designs for contractors, notably participating in the Long Thanh International Airport project.

Mitek Co. | Australia Architecture | 2020 – 2023

- Technical Drafting: Utilized Revit to design and implement technical dossiers for residential projects in Australia, ensuring strict compliance with international building standards.
- Project Management: Acted as the primary point of contact for Australian clients to gather requirements, handle feedback, and ensure timely project delivery.
- Process Optimization: Proposed implementation strategies to optimize project timelines while maintaining high-quality output.
- Leadership: Led a small team of 3–5 members on complex projects, performing final Quality Control (QC) on all drawings before publication.

SolidLine Co. | Japanese Architect (2016 - 2020)

- Client Liaison: Conducted meetings via Skype and collaborated directly with Japanese supervisors.
- Preliminary Design: Developed preliminary design plans and drafts for client review and consultation.
- Detailing: Completed detailed technical drawings and incorporated revisions based on specific client requirements.
- Team Coordination: Served as the lead project manager within the group, coordinating with team members to expedite project progress.

PERSONAL CAPABILITIES

- Analytical Problem Solving: Proven ability to identify issues and implement effective technical solutions.
- Exceptional Attention to Detail: Meticulous in drafting, quality control, and technical diagnostics.
- Collaborative Teamwork: Strong interpersonal skills with the ability to connect team members and foster a productive working environment.
- Continuous Learning: Highly proactive in researching and mastering new software, technical standards, and innovative technologies.
- Technical Proficiency: Comprehensive understanding of engineering principles and multi-disciplinary technical requirements.

CAREER OBJECTIVE

- Technical Specialist with a solid foundation in engineering and hands-on experience in complex project implementation. I aim to leverage my expertise to optimize technical processes and contribute to the company's sustainable growth. I am committed to continuous professional development, proactively updating my skills in emerging technologies—specifically AI applications in engineering—to enhance workflow efficiency. I am seeking a long-term position where I can apply my meticulous attention to detail and problem-solving skills to tackle new challenges and deliver high-value results.

ROCHESTER-33

NEWPORT VISTA FACADE

The Rochester 33 is a masterclass in modern residential design, specifically curated for families who value both street appeal and functional luxury. The Newport Vista facade shown here is a standout, utilizing a "mixed media" approach to exterior finishes that ensures the home remains a timeless landmark in any streetscape.

Location:

7 Cardinal Crescent, Newport QLD 4020

Area:

265.30m²

ROCHESTER-33

TECHNICAL DETAILS

The facade expertly layers natural timber-look cladding against a monochromatic palette of crisp white render and deep charcoal accents. This contrast adds visual depth and a "resort-style" feel.

HIKODA

Modern with cultural identity. A pavilion combining modern and cultural nuances.

This second house presents a Modern-Classic Japanese style, often referred to as "Tudor-inspired" or "Traditional Half-Timbered" in Japanese residential catalogs. Unlike the previous Australian design, this is a 3D visualization typically used by Japanese building material companies (LIXIL or TOSTEM) to showcase how different exterior patterns—in this case, "Pattern Classic"—transform a standard home frame.

HIKODA

CIELO CHAPEL AT PARTIR KYOTO

The Cielo Chapel is one of the largest independent cathedrals in the Kyoto region. The design is a meticulous homage to European Gothic traditions, characterized by its soaring verticality and intricate stone-work ornamentation.

02

The exterior utilizes a "Mixed Masonry" look, combining warm brick-toned siding with white EPS (Expanded Polystyrene) decorative moldings and cornices to achieve high-detail classical relief with modern efficiency.

JW MARRIOTT

JW MARRIOTT CAM RANH BAY RESORT & SPA

Developed by SonKim Land, it is the first internationally branded luxury resort on Vietnam's south-central coastline and won the "Best International Leisure Development" at the 2026 International Property Awards.

Construction Process

The images illustrate the development of beachfront villages, showcasing a blend of diverse materials, robust structural designs, and contemporary systems to establish a luxurious resort environment.

Garden Villas

The villa boasts a sleek, contemporary design characterized by clean geometric lines and a minimalist white exterior. The flat-roof structure gives it a sophisticated, modern aesthetic that blends perfectly with the upscale resort vibe.

Oceanfront Villas

The finished villa showcases a sophisticated "Modern Tropical" interior. The living space is centered around a plush seating area with earthy-toned armchairs and a designer wooden coffee table, all set upon a soft, neutral-colored rug.

JW MARRIOTT COMMERCIAL KITCHEN DESIGN & INSTALLATION

This portfolio layout showcases the end-to-end design and execution of a commercial hospitality project for JW Marriott. It highlights proficiency in architectural integration, state-of-the-art commercial kitchen planning, detailed 3D technical modeling, and industrial equipment procurement.

JW MARRIOTT

The project was conceived as a low-density luxury resort spread across a vast coastal area. The planning focused on preserving the natural topography while strategically positioning multiple hotel wings to ensure maximum garden or ocean views for every room.

03

A detailed architectural line drawing of a building facade, showing multiple stories with various window shapes and structural elements. The drawing is in black lines on a white background, with a perspective view looking down a street or courtyard.

LET'S BUILD THE FUTURE TOGETHER!
